

Marine start-up Arwinger has a new adaptation to the separation toilet - a handy cassette for sanitary and odourless emptying - which it will soon launch in the UK.

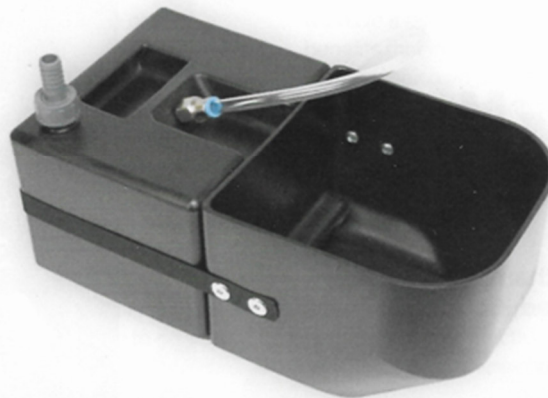

The company points out that separation toilets are cheap to maintain, work without technology and are almost indestructible.

In addition, they work without expensive chemicals that are harmful to the environment and health, they do not create unpleasant odours and also provide a degree of independence for boaters.

But despite this, disposal can still be unsavoury and unpleasant.

To address this, Arwinger has developed the **CassetteSeparationToilet** - a separation toilet with a closed cassette to collect the solids and liquids.

MARINE TOILET TROUBLES? ARWINGER HAS THE ANSWER

Source: Arwinger

■ Arwinger's **CassetteSeparationToilet** is a separation toilet with a closed cassette to painlessly collect the solids and liquids for disposal.

When it comes to disposal, the cassette can be conveniently removed for emptying through the service flap.

For all those that have

a permanently installed plastic toilet from Thetford, Arwinger has also developed an assembly set so that a classic separation toilet can be converted into

a cassette toilet in a few simple steps.

The Arwinger **CassetteSeparationToiletKit** cassette is positioned in the service compartment and replaces the Thetford chemical cassette one-for-one. The solids fall to the cassette's open container, which is fitted with a compostable bag and the liquid is fed into the cassette's tank via the hose.

For emptying, both cassette parts can be separated. The tank for the solids has a volume of approx. 9 litres, the one for the liquid approx. 7.5 litres. The fill level of the liquid tank can be read with the help of an optical fill level indicator.
